

PORT FACILITY SECURITY OFFICER

Introduction

Maritime security encompasses a range of measures taken by maritime industries and related industries to address terrorism, sabotage, hostage, stowaways, illegal immigrants, asylum seekers, piracy and armed robbery at sea, seizure, pilferage, annoyance and surprise.

To address the issues raised above, Port Facility Security Officers need to receive appropriate training which will enable them to effectively implement the responsibilities and maintain an acceptable level of risk at all security levels.

Security control measures and procedures developed in the PFSP which are intended to reduce security risks and threats, need to be effectively implemented. Some examples of security measures are, to:

- Prevent access to the port by persons without a legitimate reason to be there for the purpose of committing unlawful acts.
- Prevent introduction of unauthorized weapons, dangerous or hazardous substances and devices, into the port or vessels using the port.
- Prevent personal injury or death, or damage to the port, port facility, ship or port infrastructure by explosive or IED devices.
- Prevent tampering with cargo, essential equipment, containers, utilities, protection systems, procedures and communications systems affecting the port and other criminal activities.
- Prevent smuggling of contraband, drugs, narcotics, other illegal substances and prohibited material.
- Protect against the unauthorized disclosure of classified material, commercially proprietary information or security sensitive information.

Objectives

Those who successfully complete this course should be able to undertake the duties and responsibilities as a Port Facility Security Officer, as defined in section A/17.2 of the ISPS Code.
